Are Pesticides Really Necessary

ARE PESTICIDES REALLY NECESSARY? Spring is the time of year when many insect and disease pests will soon wake up and lick their chops as the new growth emerges on trees and shrubs in our landscapes. Some homeowners use pesticides to attempt to control these pests. However, before making final plans it is wise to understand some important facts.

ARE PESTICIDES REALLY NECESSARY?

Pesticides help farmers do that. Pesticides enable farmers to produce safe, quality foods at affordable prices. They also help farmers provide an abundance of nutritious, all-year-round foods, which are necessary for human health. Fruits and vegetables, which provide essential nutrients, are more abundant and affordable. Grains, milk and proteins, which are vital to childhood development, are more widely available because of lower costs to produce food and animal feed.

Importance & Benefits of Pesticides | Pesticide Facts

Book : Are pesticides really necessary ? 1981 pp.xiii + 245 Abstract : In this book, written for the non-technical reader, the author first examines the many defences, both natural and man-induced, that prevent diseases and pests (including arthropods) from overwhelming man.

Are pesticides necessary to feed the world?

Pesticide is a broad term that includes insecticides (insect killers), herbicides (weed or plant killers), fungicides (fungus killers), rodenticides (rodent killers), miticides which are used for mite control and molluscicides that kill snails and slugs. Before using any pesticide, be sure it is actually necessary.

Grow For It! Is that pesticide really necessary?

Pesticide exposure has been linked to a number of health problems in children, including lower IQs, autism, ADHD, lack of physical coordination, loss of temper, bipolar illness, schizophrenia, and depression. These are reported correlations, not proven causations. He cites birth defects and gene alterations in mice exposed to pesticides, but there is no comparable evidence for humans. I agree ...

Pesticides: Just How Bad Are They? - Science-Based Medicine

Yes, adding pesticides can increase the shelf life of an apple from just a few weeks to over a year. This is definitely a major advantage when it comes to our produce, not only in terms of reducing waste, but also in reducing costs since pesticides are generally a low-cost alternative for crop health. They don't cost much to incorporate, and they actually save an exponential amount of money in terms of crop success and reduced wastage.
