Calculus of Fractions and Homotopy Theory Professor Dr. Peter Gabriel, Professor Dr. Michel Zisman (auth.) The main purpose of the present work is to present to the reader a particularly nice category for the study of homotopy, namely the homo topic category (IV). This category is, in fact, - according to Chapter VII and a well-known theorem of J. H. C. WHITEHEAD - equivalent to the category ...

calculus of fractions in nLab

In homotopy theory, for example, there are many examples of mappings that are invertible up to homotopy; and so large classes of homotopy equivalent spaces [clarification needed]. Calculus of fractions is another name for working in a localized category. Introduction and motivation. A category C consists of objects and morphisms between these objects. The morphisms reflect relations between ...

Abstract. We give necessary and sufficient conditions on class S of maps of a category C so that a good calculus of fractions is possible in $C[S^{-1}]$, and a geometric characterization of the commutative diagrams in the category of fractions. These conditions are also described simply in terms of Grothendieck topologies. We characterize the categories which arise in this manner by the fact that ...
